

1. Posterior distributions, 95% and 66% CIs of differences in **mean** expected payoff / optimal payoff on the last trial.
Quantile dotplots and CDFs perform best on average.
Text performance depends on the prediction interval.

2. Posterior distributions, 95% and 66% CIs of differences in **SD** of expected payoff / optimal payoff on the last trial.
Quantile dotplots and CDFs are the most consistent.
Text again depends on the prediction interval.
